### **Research Fields:**

Network Security,  
Malware Analysis,  
Blockchain Security,

### **MSc Program in Cyber Security**

The Cyber Security MSc Program aims to train experts in the field of cyber security, one of rising importance. The program has Thesis and Non-Thesis options. The must courses are Cyber Systems and Information Security, Network Security. There are many specialized courses, such as Cryptography, Operating System Security, and Malware Analysis. The theoretical knowledge is complemented by extensive hands-on tasks involving many state-of-the-art tools of the trade and programming. Additionally, students can take part in academic research under their courses, possibly leading to publication. The students come from interdisciplinary backgrounds. A strong background in engineering and programming is beneficial but not strictly necessary, as preparatory courses are also offered.
